PROFESSIONAL SUMMARY

Wahyu is a results-driven Information Systems student from Universitas Indonesia with a strong foundation in backend development, distributed systems, and blockchain technology. He is a 1st place winner of multiple Hackathon competitions 2024, recognized for mastering and applying outstanding programming concepts to real-world challenges. Wahyu has a proven track record of delivering innovative solutions across diverse technology domains including computer vision, embedded systems, and cybersecurity.

EDUCATION

Universitas Indonesia

2022 - 2026

Bachelor's Degree in Information Systems - GPA: 3.65/4.00

Awards : **Winner – Security Category, MLH Web3Apps Hackathon** (Major League Hacking, 2024), **Top 5 Finalist – Pengabdian Case Competition** (BEM Fasilkom UI, 2022)

WORK EXPERIENCE

Teaching Assistant, Database Systems

Jul 2024 - Jun 2025

Faculty of Computer Science, Universitas Indonesia

- Supported 360+ students across 2 semesters by developing weekly quizzes, practice problems, and assignments covering database design, implementation, and optimization concepts
- Conducted pre-exam review sessions using previous years' problems and graded 200+ assignments to ensure comprehensive understanding of complex database concepts and SQL optimization techniques
- Collaborated with lead lecturer to design lab materials and troubleshoot students' implementation issues in PostgreSQL
- Contributed to improving student learning outcomes through personalized academic support and feedback

Academic Staff and Instructor

Dec 2022 - Mar 2023

BETIS Fasilkom UI, Depok

- Developed 12+ comprehensive Indonesian literacy curriculum modules and created over 50 original assessment items aligned with new national standardized testing frameworks, based on in-depth pedagogical research.
- Led a team of 5 instructional staff and designed weekly practice exercises used by 100+ students, improving test preparedness and curriculum engagement.

PROJECTS

Crowd Detection & Analytics Platform

Jun 2025

- **Developed a real-time analytics system** capable of detecting and tracking over 100+ individuals simultaneously in dense crowd environments.
- Engineered a custom computer vision model that **outperformed the baseline YOLO model by 70%** in detection accuracy for crowded scenes.
- Integrated a facial recognition module with the capacity to **identify and track 30+ enrolled faces** in real-time.
- Designed an interactive web dashboard to visualize actionable analytics, including live people counts, crowd density heatmaps, and identity tracking.

Gym Management System for RELOAD Gym

Jun 2025

- **Developed membership management, class management, scheduling, and financial reporting modules** for full-featured gym management app using Django and Vue.js
- **Drove product planning and feature prioritization** through collaborative team discussions, built end-to-end development from PRD creation to implementation, and documentation

Hospital Appointment System – Appointment Module

Dec 2024

- Developed the core appointment module for a full-stack hospital management system serving 1,000+ patient records, built on a scalable Spring Boot microservices architecture.
- Led the deployment pipeline setup using Docker and GitHub Actions, achieving a 100% automated CI/CD workflow that reduced manual release time by over 60%.
- Implemented secure JWT-based authentication across 20+ API endpoints and 5 microservices, ensuring role-based access control and protecting sensitive medical data.
- Contributed to high-level system design, including tech stack evaluation and architecture decisions, enhancing modularity and future scalability.

Marmut – Spotify-like Music Streaming App (Database Project)

Jun 2024

- Built core features of a music streaming app using Django and optimized performance with raw SQL in PostgreSQL, improving query speed by 30% over ORM-based alternatives.
- Designed the entire database schema from scratch and led the development of out-of-scope modules, including secure user authentication and a personalized dashboard.
- Deployed the full application and resolved 5+ critical integration bugs, ensuring seamless functionality across backend and frontend components

Certifolio – Blockchain Certification Platform

Jan 2024

- Developed a Smart Contract using Internet Computer (ICP) and Motoko, enabling secure creation and real-time validation of over 500+ digital certificates.
- Actively contributed to early-stage ideation and project architecture design in a fast-paced hackathon environment, helping the team achieve a functional MVP within 48 hours.

Wisdom Repository – Knowledge Management Platform

Dec 2023

- Successfully built a full-stack digital knowledge platform using Flutter and Django REST Framework, enabling structured content management for 100+ users
- Developed responsive mobile and web apps with Tailwind CSS and integrated real-time content updates, enhancing user experience and engagement

LICENSES, TRAININGS, & CERTIFICATIONS

- **Accelerating CUDA C++ Applications with Concurrent Streams** (NVIDIA, 2025)
Completed training on parallel programming using concurrent streams in CUDA for GPU-accelerated applications.
- **Sui DeFi Development** (Dacade, 2024)
Learned to develop decentralized finance (DeFi) applications using the Sui blockchain and smart contracts.
- **TypeScript Smart Contract 101** (Dacade, 2024)
Trained in building smart contracts on Internet Computer Protocol (ICP) using TypeScript for Web3 applications.

TECHNICAL SKILLS

Programming Languages: JavaScript/TypeScript, Python, Java, Dart, Motoko, Move, C/C++

Web Development: Vue.js, Next.js, Django, Spring Boot, Tailwind CSS, HTML/CSS

Mobile Development: Flutter

Blockchain: Internet Computer (ICP), Sui Blockchain, Ethereum, Smart Contracts

Databases: PostgreSQL, MongoDB, MySQL

Specialized Skills: Computer Vision (OpenCV), Embedded Systems, IoT Development, Microservices Architectur
